## CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been prepared and distributed to its customers in accordance with the appropriate distribution method(s) based on population served. Furthermore, I certify that the information contained in the report is correct and consistent with the water quality monitoring data for sampling performed and fulfills all CCR requirements of the Code of Federal Regulations (CFR) Title 40, Part 141.151 – 155.

Cindy M. Shipp  
Name

Bookkeeper

Date

## SUBMISSION OPTIONS (Select one method ONLY)

You must email or mail a copy of the CCR, Certification, and associated proof of delivery method(s) to the MSDH, Bureau of Public Water Supply.

Mail: (U.S. Postal Service)

MSDH, Bureau of Public Water Supply

P.O. Box 1700

Jackson, MS 39215

Email: [water.reports@msdh.ms.gov](mailto:water.reports@msdh.ms.gov)

2021 Annual Drinking Water Quality Report  
 Midway Community Water Association  
 PWS#: 0820010, 0820027 & 0820028  
 June 2022

RECEIVED  
 MSDH-WATER SUPPLY  
 2022 JUN 13 PM 02:27

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian Upper Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Midway Community Water Association have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Cindy M. Shipp at 662.571.0704. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 7:00 PM at the Midway County Barn.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2021. In cases where monitoring wasn't required in 2021, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Contaminant Level (MCL)** - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per million (ppm) or Milligrams per liter (mg/l)** - one part per million corresponds to one minute in two years or a single penny in \$10,000.

**Parts per billion (ppb) or Micrograms per liter** - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure-ment	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
10. Barium	N	2019*	.0121	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2019*	1.3	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits

14. Copper	N	2019/21	6	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2019*	.38	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2019/21	2	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019*	190000	No Range	ppb	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.

### Disinfection By-Products

81. HAA5	N	2021	39	13.3 – 48.9	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2021	45	50 – 57.5	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2021	1.7	1 – 3	ppm	0	MRDL = 4	Water additive used to control microbes

PWS ID#: 0820027

### TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
-------------	---------------	----------------	----------------	--	--------------------	------	-----	--------------------------------

### Inorganic Contaminants

10. Barium	N	2019*	.0076	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2019*	3.1	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2019/21	.4	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2019*	.317	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2019/21	3	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019*	150000	No Range	ppb	NONE	NONE	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.

### Disinfection By-Products

81. HAA5	Y	2021	96	58.9 – 95.5	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2021	70	48.7 – 69.5	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2021	1.7	.8 – 3.60	ppm	0	MRDL = 4	Water additive used to control microbes

PWS ID#: 0820028

### TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
-------------	---------------	----------------	----------------	--	--------------------	------	-----	--------------------------------

### Inorganic Contaminants

10. Barium	N	2019*	.0074	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2019*	4.3	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2018/20*	.5	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2019*	.324	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories

17. Lead	N	2018/20*	2	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019*	150000	No Range	ppb	NONE	NONE	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.

## Disinfection By-Products

81. HAA5	Y	2021	62	24 - 84	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2021	67	40 – 98.1	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2021	1.9	7– 3.6	ppm	0	MRDL = 4	Water additive used to control microbes

\* Most recent sample. No sample required for 2021.

### Disinfection By-Products:

(81) Haloacetic Acids (HAA5). Some people who drink water containing bromate in excess of the MCL over many years may have an increased risk of cancer

(82) Total Trihalomethanes (TTHMs). Some people who drink water containing Trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

Our system # 820027 received a MCL violation for the Haloacetic Acids (HAA5) exceeded the Maximum Contaminant Level for the third quarter of 2021. Our system # 820028 received a MCL violation for the Haloacetic Acids (HAA5) exceeded the Maximum Contaminant Level for the fourth quarter of 2021. On 3/30/2021 this public water system (# 280010) was required by the MS State Department of Health, Bureau of Public Water supply to participate in an Administrative Hearing due to violations of the Disinfection By-Products Rule.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. On system # 820028 our system failed to collect the required sample for chlorine. We were required to collect 1 sample in June and collected 0. The required sample has since been taken that shows we are meeting drinking water standards.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

### Significant Deficiencies System # 820027

#### Monitoring and Reporting of Compliance Data Violations:

During a sanitary survey conducted on 11/02/2021, the Mississippi State Department of Health cited the following significant deficiency(s):

#### Capacity and Design of Storage Tanks

Corrective Actions: The system is scheduled to complete corrective actions by 3/27/2023 using a compliance plan or are within the initial 120 days minimum.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or manmade. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Midway Community Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

# 2021 Annual Drinking Water Quality Report

## Midway Community Water Association

### PWS#:

**08200010, 08200027 & 08200028**

### June 2022

Disinfection By-Products						
	N	2019/20*	2	0	ppb	0
Sodium	N	150000	No Range	ppb	NONE	Al = 15
81. HAAs	Y	2021	62	24 - 54	ppb	0
92. TTHM [Total Trihalomethanes]	N	2021	67	40 - 98.1	ppb	0
Chlorine	N	2021	1.9	.7 - 3.6	ppm	0
					MRDL	= 4
					Water additive used to control	microbes.

\* Most recent sample. No sample required for 2021.

#### Disinfection By-Products:

- (81) Halogen Acids (HAAs) - Some people who drink water containing bromates in excess of the MCL over many years may have an increased risk of cancer.
- (82) Total Trihalomethanes (TTHMs) - Some people who drink water containing Trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

Our system # 820027 received a MCL violation for the Haloacetic Acids (HAAs) exceeded the Maximum Contaminant Level for the third quarter of 2021. Our System # 820028 received a MCL violation for the Haloacetic Acids (HAAs) exceeded the Maximum Contaminant Level for the fourth quarter of 2021. On 3/20/2021 this public water system (# 280010) was required by the MS State Department of Health, Bureau of Public Water supply to participate in an Administrative Hearing due to violations of the Disinfection By-Products Rule.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. On system # 820028 our system failed to collect the required sample for chlorine. We were required to collect 1 sample in June and collected 0. This required sample has since been taken that shows we are meeting drinking water standards.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. #### Significant Deficiencies System # 820027

#### Monitoring and Reporting of Compliance Data Violations:

During a sanitary survey conducted on 1/10/2021, the Mississippi State Department of Health cited the following significant deficiency(s).

#### Capacity and Design of Storage Tanks

Corrective Actions: The system is scheduled to complete corrective actions by 3/27/2023 using a compliance plan or within the initial 120 days minimum.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or manmade. These substances can be inorganic, organic and radionuclides and radioactive substances that are naturally occurring or manmade. These may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-26-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants, can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline at 1-800-26-4791.

The Midway Community Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We are committed to continually improve our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian Upper Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinants were made available to our public water system and is available for viewing upon request. The wells for the Midway Community Water Association have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Cindy M. Ship at 662-571-0704. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regular scheduled meetings. They are held on the first Tuesday of each month at 7:00 PM at the Midway County Barn.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2021. In cases where monitoring was not required in 2021, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity, microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may reasonably be expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant allowed in drinking water. There is no known or expected risk to health. MCLs are set close to the MCLGs as feasible using the best available treatment technology.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a contaminant in drinking water below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10.000.000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2.000 years, or a single penny in \$10.000.000.

TEST RESULTS									
PWS ID: 0820028									
Inorganic Contaminants									
Contaminant	Violation Y/N	Date	Collected	Range or # of Samples	Measure	Method	MCLG	MCL	Likely Source of Contamination
16. Fluoride	N	2019*	.324	No Range	ppm	4			Excessive fluoride used to control dental caries.
15. Chloride	N	2019*	.15	No Range	ppm	13	AL=13	100	Dissolve from natural deposits; excess salt water.
14. Copper	N	2018/20*	.43	No Range	ppb	100			Excessive from natural deposits; dissolve from natural deposits; excess salt water.
13. Chromium	N	2019*	.074	No Range	ppm	2			Dissolve from natural deposits; excess salt water.
10. Barium	N	2019*	.0074	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
9. Lead	N	2019/21	.31	No Range	ppb	100	AL=1.3	100	Dissolve from natural deposits; excess salt water.
8. Zinc	N	2019/21	.4	No Range	ppm	1.3			Dissolve from natural deposits; excess salt water.
7. Cadmium	N	2019/21	.0	No Range	ppb	100	AL=1.3	100	Dissolve from natural deposits; excess salt water.
6. Manganese	N	2019/21	.4	No Range	ppb	0	AL=15		Dissolve from natural deposits; excess salt water.
5. Iron	N	2019/21	.317	No Range	ppm	4			Dissolve from natural deposits; excess salt water.
4. Nickel	N	2019/21	.4	No Range	ppb	100	AL=1.3	100	Dissolve from natural deposits; excess salt water.
3. Manganese	N	2019*	.39	13.3 - 46.0	ppb	0	60	80	By-product of drinking water distribution.
2. THM	N	2021	.45	50 - 57.5	ppb	0	80	80	By-product of drinking water distribution.
1. Chlorine	N	2021	1.7	1 - 3	ppm	0	0	0	Water disinfectant.
Inorganic Contaminants									
Contaminant	Violation Y/N	Date	Collected	Range or # of Samples	Measure	Method	MCLG	MCL	Likely Source of Contamination
16. Fluoride	N	2021	1.7	.8 - 3.60	ppm	0	MRDL = 4		Water additive used to control dental caries.
15. Chloride	N	2021	70	48.7 - 69.5	ppb	0	80	80	By-product of drinking water distribution.
14. HAA5	Y	2021	96	58.9 - 95.5	ppb	0	30	30	Product of drinking water distribution.
13. Total THM	N	2021	96	58.9 - 95.5	ppb	0	80	80	By-product of drinking water distribution.
12. Lead	N	2019/21	3	0	ppb	0	AL=15		Dissolve from natural deposits; excess salt water.
11. Zinc	N	2019/21	3.17	No Range	ppm	4			Dissolve from natural deposits; excess salt water.
10. Cadmium	N	2019/21	.4	No Range	ppb	100	AL=1.3	100	Dissolve from natural deposits; excess salt water.

10. Cadmium	N	2019*	.0	No Range	ppb	0	0	0	Dissolve from natural deposits; excess salt water.
9. Nickel	N	2019*	.19000	No Range	ppb	0	0	0	Water disinfectant.
8. Manganese	N	2019/21	.2	No Range	ppb	0	0	0	Dissolve from natural deposits; excess salt water.
7. Manganese	N	2019*	.0	No Range	ppb	0	0	0	Dissolve from natural deposits; excess salt water.
6. Iron	N	2019/21	.2	No Range	ppb	0	AL=15		Dissolve from natural deposits; excess salt water.
5. Iron	N	2019*	.0	No Range	ppb	0	0	0	Water disinfectant.
4. Nickel	N	2019/21	.2	No Range	ppb	0	AL=15		Dissolve from natural deposits; excess salt water.
3. Manganese	N	2021	45	50 - 57.5	ppb	0	80	80	By-product of drinking water distribution.
2. THM	N	2021	45	50 - 57.5	ppb	0	80	80	By-product of drinking water distribution.
1. Chlorine	N	2021	1.7	1 - 3	ppm	0	0	0	Water disinfectant.
Organic Contaminants									
Contaminant	Violation Y/N	Date	Collected	Range or # of Samples	Measure	Method	MCLG	MCL	Likely Source of Contamination
16. Fluoride	N	2019*	.0121	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
15. Chloride	N	2019*	.0076	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
14. Copper	N	2019*	.0074	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
13. Chromium	N	2019*	.0074	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
12. Barium	N	2019*	.0074	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
11. Lead	N	2019/21	.0	No Range	ppb	100	100	100	Dissolve of natural deposits; excess salt water.
10. Manganese	N	2019*	.13	No Range	ppb	100			Dissolve of natural deposits; excess salt water.
9. Nickel	N	2019*	.13	No Range	ppb	100			Dissolve of natural deposits; excess salt water.
8. Manganese	N	2019*	.0	No Range	ppb	100			Dissolve of natural deposits; excess salt water.
7. Manganese	N	2019*	.0	No Range	ppb	100			Dissolve of natural deposits; excess salt water.
6. Iron	N	2019*	.0	No Range	ppb	100			Dissolve of natural deposits; excess salt water.
5. Iron	N	2019*	.0	No Range	ppb	100			Dissolve of natural deposits; excess salt water.
4. Nickel	N	2019*	.0	No Range	ppb	100			Dissolve of natural deposits; excess salt water.
3. Manganese	N	2021	.0121	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
2. THM	N	2021	.0121	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
1. Chlorine	N	2021	.0121	No Range	ppm	2			Dissolve of drilling wastes; dissolve from natural deposits; excess salt water.
